

Work and collaborate more effectively – from everywhere

Flexible Unified Communications delivered from the cloud

nTwine is a complete, integrated, easy to use solution for voice, video and collaboration services across global markets.

Delivered via the cloud, it provides service providers and resellers with all the tools required to meet new enterprise demands, improve their productivity, reduce costs and completely transform their communications without the need for large upfront investments.

Extend your service across global markets - As a global service provider we operate communication services in over 140 countries around the world and leverage our global network, infrastructure and relationships to deliver a ubiquitous high quality service across global markets.

Automated back office covering full service life-cycle

Our modular, cloud-based, white label solution combines best of breed technologies and includes an automated back office that covers each element of the service life-cycle, giving our partners a complete set of integrated and automated tools to build, deliver, manage and charge for their service offering whilst maintaining a unique and highly intuitive user experience and providing high levels of revenue assurance.

The PCCW Global Difference

Highly experienced

Delivering large, complex cloud communications solutions for our partners for over 10 years.

Scalability across global markets

Hosted globally in our resilient private cloud. nTwine delivers a ubiquitous, reliable service across global markets.

Improve productivity, reduce cost

Suppress internal development costs and spend valuable resource on innovation, customer acquisition and retention, rather than maintenance and problem-solving.

Rapid deployment

A rapid, CAPEX-light market entry model for that enables you to the ability to monetize quickly.

Flexibility

Customise your feature set and product offers, to differentiate from your competitors and avoid the race to the bottom.

Reliability

Delivered globally via PCCW Global's secure, reliable MPLS network connecting over 140 countries.
